

CLAIMS

What is claimed is:

- 5 1. A method for cleaning a grinding machine, comprising:
apportioning a predetermined amount of a cleaning material;
inserting the cleaning material into the grinding machine;
grinding the cleaning material using the grinder; and
purging the coarse material from the coffee grinder.

10

2. The cleaning method of claim 1 wherein the coarse material comprises one
or more of the following organic materials:

- (a) legumes;
(b) corn husks;
15 (c) walnut shells;
(d) pecan shells;
(e) nuts;
(f) rice;
(g) dried corn kernels;
20 (h) barley;
(i) wheat;
(j) grain;

(k) fiber;

(l) legume;

(m) nut;

(n) bark;

5 (o) shell;

(p) corn meal;

(q) bulgur wheat;

(r) oatmeal;

(s) quick oats;

10 (t) grits; and

(u) rice hulls.

3. The cleaning method of claim 2 wherein the organic material comprises substantially 40% bulgur wheat.

15

4. The cleaning method of claim 3 wherein the organic material comprises at least 40% cornmeal.

5. The cleaning method of claim 1, wherein the coarse material is in the form
20 of a tablet.

6. The cleaning method of claim 5, wherein the tablet is sized and shaped like a coffee bean.

7. The cleaning method of claim 1, wherein the coarse material is colored.

5

8. The cleaning method of claim 1, further comprising a binding material.

9. A grinding machine cleaner, comprising:

food-safe coarse materials;

10 a mold for shaping and sizing the organic coarse materials into a tablet of a predetermined size and shape; and

a binding material combined with the organic coarse material to enable the organic coarse material to retain its shape and size once the organic coarse material is removed from the mold.

15

10. The grinding machine cleaner of claim 9, wherein the coarse material is colored.

11. The grinding machine cleaner of claim 9, wherein the tablet is sized and
20 shaped like a coffee bean.

12. The grinding machine cleaner of claim 9, wherein the coarse material is organic.

13. The grinding machine cleaner of claim 9, wherein the organic coarse
5 material comprises one or more of the following ingredients:

- a) bulgur wheat; and
- b) corn meal.

14. The grinding machine cleaner of claim 9, wherein the coarse material is
10 inorganic.

15. An apparatus for making a grinding machine cleaner, comprising:
a mold having a first portion having a first predetermined size and shape;
a mold having a second portion having a second predetermined size and shape
15 complementary to the first predetermined size and shape;
a pressing machine for pressing the first and second halves of the mold together at
a predetermined force; and
a predetermined quantity of coarse materials for insertion into the mold.

20 16. The apparatus of claim 13, further comprising a binding material to be
mixed in with the coarse materials.

17. The apparatus of claim 13, further comprising a coloring agent to be mixed in with the coarse materials.

18. The apparatus of claim 13, wherein the first portion of the mold is sized
5 and shaped like the bottom side of a coffee bean.

19. The apparatus of claim 13, wherein the second portion of the mold is sized and shaped like the top side of a coffee bean.

10 20. The grinding machine cleaner of claim 13, wherein the coarse material is inorganic.
